Website & On-Page SEO Audit: cbhwpsych.com

Center for Behavioral Health and Wellness, Ellicott City MD · Audited 11 Nov 2026 · 22 pages crawled

29/100

Poor

Strict weighted score across six areas

The Reviews page is an unfinished template with no reviews, and the site gives patients two different phone numbers. The robots file blocks Google's ad crawler even though Google Ads tracking runs on every page. Main content takes over 10 seconds to appear on mobile.

Critical 4 High 21 Medium 18

SCORE BY AREA (weight in brackets)

Content & medical trust [25]	20/100
Local SEO [15]	20/100
Speed (mobile lab test) [10]	20/100
Privacy, security & accessibility [10]	30/100
Technical & crawl health [20]	40/100
On-page SEO & schema [20]	40/100

FIX FIRST

1. **Let Google's ad crawler back in.** Squarespace's AI-crawler blocking also blocks AdsBot-Google, which can get ads disapproved.
2. **Use one phone number everywhere:** header, footer, schema, Contact page and Google Business Profile.
3. **Fill the Reviews page with real reviews or remove it,** and fix the Records Release form link that returns 404.
4. **Show the 988 crisis line on every page,** and give the psychiatrist's full name and MD credentials.
5. **Review the Meta Pixel and Squarespace forms with HIPAA counsel,** since they run on pages that collect insurance and treatment interest.
6. **Speed up mobile pages and build reach:** cut blocking scripts, load YouTube on click, merge the two TMS pages, and add condition and Columbia pages.

Content & medical trust — 20/100

- **Critical** The Reviews page is an unfinished template. It shows the placeholder text "Reviews Header, Reviews Subheader, Reviews Content" and no reviews at all. In the menu on all 22 pages.
- **High** The psychiatrist's identity is unclear. The heading reads "William Zakee Mcgill", the bio says "Dr. William M.", and no MD or board name is shown. The bio also describes current work at another health center.
- **High** Three high-school students are listed as "Medical Assistant" on the clinical team page, next to only two clinicians. On a psychiatry site this weakens trust.
- **High** There is no crisis or emergency information anywhere. 988, 911 and "emergency" appear on 0 of 22 pages.
- **High** Conditions the homepage promises to treat have no pages: PTSD and trauma, bipolar disorder, ADHD, OCD, and child or teen care. None appear in any page title.
- **High** There is no blog and no "reviewed by" line on any mental health information, so the site has nothing to rank for patient questions. 22 pages in total.
- **Medium** Many pages are thin. 9 of 22 pages have under 300 words, including Contact, Insurance, Pricing and both TMS consultation pages.
- **Medium** Typos and careless headings: "Media Appereances", "CBWH" in the Depression page title, and H1s reading "awards" and "CAREERS".
- **Medium** A Media page link opens a OneDrive file that asks visitors to sign in to Microsoft.
- **Medium** Medical claims have no sources, such as "Science has shown..." and "We are confident that you will become a better version of yourself" on the homepage.

Local SEO — 20/100

- **Critical** The site uses two different main phone numbers. The header, footer and schema use (202) 288-2834, a Washington DC number, and the Contact page lists 443-767-1565. The 202 number appears on all 22 pages.
- **High** The schema map pin is about 4.9 km away from the location in the Google Maps embed on the Contact page.
- **High** No pages target nearby patients. Columbia is listed in the schema but appears in 0 page texts. Columbia, Catonsville, Elkridge, Clarksville and Laurel: 0 of 22 pages.
- **High** No star rating, Google rating or review text appears anywhere on the site, so it has no social proof for local searchers.
- **Medium** "Suite D" is missing from the footer address and the Squarespace business schema. All 22 pages.
- **Medium** The practice name is written at least four ways: "And Wellness", "& Wellness", "Wellness, LLC" and "Wellness LLC" (no comma).

Speed (mobile lab test) — 20/100

- **Critical** The main content takes far too long to appear. Google's target is 2.5 s. LCP is 10.8 s on the homepage and 10.5 s on the TMS page.
- **High** The screen stays blank for seconds, and pages are slow to become usable. First paint 8.4 s, usable at 19.0 s on the homepage and 22.6 s on TMS.
- **High** Render-blocking files delay every page. 16 of 20 scripts block rendering, costing about 4.8 s on the homepage.
- **High** The TMS page is very heavy because 6 YouTube players load at once. 5.2 MB and 192 requests.
- **Medium** Too much unused code loads. 956 KB of unused JavaScript, and third-party code blocks the main thread for 740 ms.
- **Medium** The homepage layout shifts while loading. CLS 0.124, above Google's 0.1 limit.

Privacy, security & accessibility — 30/100

- **High** The Meta Pixel and Google Ads tag run on every page, including the contact and TMS consultation forms. HHS guidance treats tracking on health pages as a HIPAA risk. All 22 pages.
- **High** Forms ask about services wanted, insurance and appointment preferences through Squarespace forms. Squarespace does not offer a HIPAA business associate agreement.
- **High** The HSTS header is set to max-age=0, which switches off browser enforcement of HTTPS.
- **High** Text fails color contrast. 6 elements on the homepage, 10 on the TMS page.
- **Medium** Basic accessibility checks fail: an unnamed link and out-of-order headings on both tested pages, and an untitled iframe on TMS.
- **Medium** Third-party cookies were set on page load in testing. Confirm the cookie banner holds tracking until a visitor opts in.

Technical & crawl health — 40/100

- **Critical** robots.txt blocks AdsBot-Google and AdsBot-Google-Mobile, while a Google Ads conversion tag runs on every page. Google cannot check ad landing pages, which can lead to disapproved ads.
- **High** The Records Release form in the Forms menu returns 404. All 22 pages.
- **High** The sitemap lists two duplicate pages. /home copies the homepage, and /tms-consultation-intake copies /tms-consultation. Neither has any internal links.
- **High** Two TMS pages compete. /tms-depression has no city in its title, an all-caps H1, and links from only 2 pages, while /tms-therapy covers the same topic.
- **Medium** Five menu items go through temporary 302 redirects: /about, /info, /forms, /specialties-1, /follow. All 22 pages.
- **Medium** 26 AI and Google crawlers are blocked, including GPTBot, ClaudeBot, Google-Extended and Applebot-Extended. This reduces visibility in AI assistants.
- **Medium** New patients must download PDF forms. There is no online booking or secure patient portal.
- **Medium** The LinkedIn link and schema use an admin-view URL (?viewAsMember=true), which blocks logged-out visitors.

On-page SEO & schema — 40/100

- **High** Two conflicting business schemas are on every page, with different names, phone formats, address detail and coordinates. The Squarespace block also contains raw HTML and broken opening hours (",,").
- **High** Medical schema is missing. The business is a generic LocalBusiness, not MedicalClinic. Clinicians have no Physician or Person schema, and FAQ sections have no FAQPage schema.
- **High** Images have no alt text, including award and certification badges. 178 of 294 images (48 unique) across all 22 pages.
- **Medium** Titles, descriptions and H1s are duplicated on two page pairs: Home and /home, and both TMS consultation pages.
- **Medium** Some pages have several H1s. 4 on Insurance, 2 on TMS Therapy.
- **Medium** Some titles are weak or too long: "Award Page" and "TMS Depression Treatment" have no city. 5 titles exceed 60 characters.
- **Medium** The award page has no meta description.

HOW IT WAS SCORED

Each area was graded strictly on the evidence, then weighted. Medical trust and content carry the most weight because this is health information. Findings come from a full crawl of all 21 sitemap URLs plus the root on 11 Nov 2026.

LAB RESULTS AND BASICS THAT PASSED

Lighthouse mobile scores were Performance 31, Accessibility 90, Best Practices 74 and SEO 100 on the homepage, and 37, 86, 74 and 100 on TMS. All URLs load, HTTPS and www redirect in one hop, and every page has a canonical, Open Graph tags and a viewport tag. The four main service pages are 1,400 to 1,700 words with the city in the title. Speed was tested in one simulated run.

NOT ASSESSED

Keyword rankings, organic traffic, backlinks, Google Business Profile, third-party reviews and real-user Core Web Vitals were not assessed. They need account or tool access and are not part of the score. HIPAA points are flags for review, not legal advice.
