Website & On-Page SEO Audit: yourlocalpsychiatrist.nyc

Your Local Psychiatrist NYC, telehealth psychiatry & therapy · Audited 13 Nov 2026 · 600 of 954 sitemap URLs crawled

27/100

Poor

Strict weighted score across six areas

The Patient Portal link in the main menu leads to an error page, and the site lists four different phone numbers. The FAQ page still shows "Lorem ipsum" template text, provider credentials conflict between pages, and every footer reads "© 2023 LocalMD". The homepage takes 23 seconds to fully appear on mobile.

Critical 4 High 18 Medium 16

SCORE BY AREA (weight in brackets)

Speed (mobile lab test) [10]	15/100
Local SEO [15]	20/100
Content & medical trust [25]	25/100
Privacy, security & accessibility [10]	25/100
Technical & crawl health [20]	30/100
On-page SEO & schema [20]	40/100

FIX FIRST

1. **Fix the Patient Portal link** in the main menu. Existing patients currently land on an error page.
2. **Use one phone number and one address everywhere:** header, schema, contact page and Google Business Profile.
3. **Remove the FAQ placeholder text,** change the footer to the right brand and year, and correct provider credentials and duplicate profiles.
4. **Decide on the neighborhood pages.** Make them genuinely useful and link them, or merge them. Do the same for the 158 unlinked pages.
5. **Review the Meta Pixel with HIPAA counsel,** name a clinician reviewer on blog posts, and show 988 on every page.
6. **Cut mobile load time:** load reCAPTCHA once, defer scripts, and fix the slow server response.

Content & medical trust 25/100

- **Critical** The FAQ page still contains page-builder placeholder text: "I am text block. Click edit button to change this text. Lorem ipsum dolor sit amet..." /faq/.
- **High** Provider credentials conflict. Gloria Chi's URL says "md", but her page says LMSW. Stephanie English is "PMHNP, PhD" on one page and "MHNP" on another. Marta Laurette has two profiles, one LCSW and one LCSW-R.
- **High** Every footer reads "Copyright © 2023 LocalMD", which is a different brand name and three years out of date. All 600 pages.
- **High** Blog posts name no clinician. The author is "Your Local Psychiatrist", and only 1 post says it was reviewed by anyone. 285 posts.
- **High** Crisis information is rare on a site with pages about suicidal thoughts and self-harm. 988 appears on 9 of 600 pages. One page still lists the old 1-800-273-8255 Lifeline number.
- **Medium** Topics are duplicated across separate pages. Grief counseling ×2, bereavement ×2, cyclothymia ×2, and COVID-19 ×2, one of which still says "Please Protect Yourself".
- **Medium** Spelling mistakes appear in URLs and titles: "delerium" and "Bedford Stuyvessant".

Local SEO 20/100

- **Critical** The site uses four phone numbers. 718-551-3770 is in the header of every page, 718-307-1577 is in the schema and on 15 pages, 718-215-9419 is on 11 pages, and 888-628-9454 is on 7.
- **High** The location doesn't add up. The schema address is 71-16 Grand Avenue in ZIP 11378 (Maspeth, Queens), but the map pin is in Brooklyn and page titles say "Brooklyn, NY". No page shows an address.
- **High** 24 neighborhood pages, such as "Our team of Dumbo psychiatrists", serve a practice where "All appointments are done through telehealth". Pages tested were about 45% word-for-word identical. Google may treat them as doorway pages. 22 of 24 have no internal links.
- **High** The Contact page has no H1, no address and only 239 words.
- **Medium** Upstate pages for Albany, Rochester, Syracuse and Buffalo exist, but nothing links to them.
- **Medium** The Spanish page /acerca-de/ has no hreflang tag and no internal links.

Speed (mobile lab test) 15/100

- **Critical** The main content takes far too long to appear. Google's target is 2.5 s. LCP is 22.9 s on the homepage and 15.1 s on Services.
- **High** Pages are slow to become usable. Usable at 20.1 s on the homepage, Speed Index 16 s.
- **High** reCAPTCHA loads 5 times on the homepage (841 KB each), and a 596 KB HubSpot stylesheet loads as well. 3.9 MB and 153 requests.
- **High** The server is slow to respond. 740 ms on the homepage and 630 ms on Services, against Lighthouse's 600 ms threshold.
- **Medium** Render-blocking files delay first paint. 23 of 25 scripts block rendering, costing 1.4 to 2.5 s.
- **Medium** Images are not optimized. 331 KB could be saved with modern formats and 313 KB with correct sizing.

Privacy, security & accessibility 25/100

- **High** The Meta (Facebook) Pixel loads on every page, including condition pages such as suicidal thoughts and substance use, alongside Google tags. HHS guidance treats this tracking as a HIPAA risk.
- **High** All standard security headers are missing: HSTS, CSP, X-Frame-Options, X-Content-Type-Options, Referrer-Policy and Permissions-Policy.
- **High** Pinch-to-zoom is blocked (maximum-scale=1, user-scalable=0), so visitors with low vision cannot enlarge text. All 600 pages.
- **Medium** The booking form is a HubSpot embed. Confirm the account is on a HIPAA-eligible plan with a signed BAA.
- **Medium** XML-RPC accepts requests, and the page code shows WordPress 6.8.12, a major version behind. The author sitemap exposes the account names rudoymedical and devenup.
- **Medium** Text fails color contrast, and headings are out of order on both pages tested.

Technical & crawl health 30/100

- **Critical** The "Patient Portal" link in the main menu goes to an eClinicalWorks login page that returned 404 in testing. All 600 pages.
- **High** 158 of 600 crawled pages have no internal links pointing to them. 81 service, 25 condition and 11 provider pages.
- **High** The sitemap lists 347 tag archives, which only repeat post excerpts. 36% of 954 sitemap URLs.
- **High** Two condition pages contain malformed links (http://diseases/...) that lead nowhere.
- **Medium** Some internal links point to the www address and have to redirect. Contact, EMDR and Psychiatric Evaluation.
- **Medium** A retired Universal Analytics tag (UA-146993433-1) still loads, alongside two separate GA4 properties, so reporting is split.

On-page SEO & schema 40/100

- **High** Key pages have no H1. 11 pages, including Services, Contact, Mission and a provider page. Insurance and Patient Guide have empty H1 tags.
- **High** The MedicalBusiness schema has errors. Social links are placed in additionalType, a 718 number is labeled toll-free, a Queens ZIP is paired with "New York", and the phone doesn't match the header.
- **Medium** The 37 provider profiles have no Physician or Person schema, and the FAQ has no FAQPage schema.
- **Medium** Titles are too long and will be cut off in results. 227 of 600 are over 60 characters.
- **Medium** Meta descriptions are too long. 108 of 600 are over 160 characters.
- **Medium** H1s and descriptions are duplicated. 3 H1 pairs, plus a shared description on Brooklyn Heights and Fort Greene.
- **Medium** Category and author archives have no meta description. 8 pages.

HOW IT WAS SCORED

Each area was graded strictly on the evidence, then weighted. Medical trust and content carry the most weight because this is health information. The crawl on 13 Nov 2026 covered every page, provider, category and author URL and 284 of 291 posts. Tag archives were counted but not crawled.

LAB RESULTS AND BASICS THAT PASSED

Lighthouse mobile scores were Performance 39, Accessibility 89, Best Practices 78 and SEO 100 on the homepage, and 46, 88, 78 and 93 on Services. HTTPS and www redirect in one hop. Every page has a title, a canonical, Open Graph tags and breadcrumbs. Condition pages are long and cite NIH sources. Speed was tested in one simulated run.

NOT ASSESSED

Keyword rankings, organic traffic, backlinks, Google Business Profile, third-party reviews and real-user Core Web Vitals were not assessed. They need account or tool access and are not part of the score. HIPAA points are flags for review, not legal advice.
