Website & On-Page SEO Audit: painspecialtygroup.com

Pain Specialty Group · Audited 10 Nov 2026 · 631 pages crawled

32/100

Poor

Strict weighted score across six areas

The site is loaded with blog posts but weak where patients decide. Key treatment links are broken, 95% of pages are formula-style blog content without a named clinician, and the two offices have almost identical pages.

Critical 6 High 27 Medium 13

SCORE BY AREA (weight in brackets)

Content & medical trust [25]	20/100
On-page SEO & schema [20]	30/100
Local SEO [15]	30/100
Accessibility & security [10]	35/100
Technical & crawl health [20]	40/100
Speed (mobile lab test) [10]	50/100

FIX FIRST

1. **Repair the 13 broken URLs** and 508 internal links to them. Point /contact to /contactus.
2. **Build real service pages** for radiofrequency ablation, facet and SI joint care, spinal cord stimulation and kyphoplasty.
3. **Review the 597 blog posts.** Merge or remove region-swapped posts, then name a clinician author and reviewer with dates on those that stay.
4. **Write distinct Newington and Newmarket pages** with separate MedicalClinic schema.
5. **Rewrite titles and H1s** to under 60 characters, led by condition and city, and fix the & encoding bug.
6. **Have counsel review analytics on patient pages**, then add security headers and upgrade PHP.

Technical & crawl health 40/100

- Critical — 12 linked treatment URLs return a server error (HTTP 500), including /services/radiofrequency-ablation and /services/pain-management-services. 65 internal links, confirmed over 3 retests.
- Critical — /contact returns 404, but the working page is /contactus. Linked from 443 pages.
- High — The "For Clinicians" link goes to painspecialtygrp.com, which returns a 500 error.
- High — AI-assistant guide llms.txt is mostly dead, including /contact-us, /visit and /pay-now. 30 of 53 links fail.
- High — Weak internal linking leaves most of the site barely connected. 502 of 631 pages have 2 or fewer internal links pointing to them.
- High — Pages link to the homepage over http://, forcing a redirect. 599 pages.
- Medium — The XML sitemap has no lastmod dates, and robots.txt does not declare it. 631 URLs.
- Medium — Pages linked sitewide are missing from the sitemap, including /contents/aboutus/* and patient forms. 7 URLs.
- Medium — Menu items such as About and Patients use javascript:void(0), which search engines cannot follow. 9 on the homepage.

On-page SEO & schema 30/100

- High — Title tags are far too long and will be cut off in results. 626 of 631 exceed 60 characters. Blog median is 118, maximum 139.
- High — Double-encoded & appears in the source of core page metadata. 31 titles and 21 descriptions.
- High — The homepage title opens with "Now Offering Telehealth Appointments", and its H1 is only the brand name. "Pain management" is not the lead message.
- High — Service H1s are bare labels such as "Botox" and "Epidural", with no intent or location. 20 service pages.
- High — Images have no alt text. 1,181 images on 625 pages, including 52 of 96 on the homepage.
- High — Key schema is absent: no MedicalClinic, BlogPosting, BreadcrumbList or FAQPage on any page, though service pages are written as Q&A.
- Medium — AggregateRating is self-published on the practice's own pages, which Google does not show as review stars. 25 pages.
- Medium — The homepage has 2 H2s across about 1,490 words, and one of them is "QUICKLINKS".
- Medium — Home and Telehealth share a title and description. About, Services and Contact share a description. Home and About share an H1.
- Medium — Template leftovers show in titles: "Newington, NH: Pain Management: : Pain Specialty Group" and "Request Now with Pain Specialty Group now."
- Medium — Social sharing data is incomplete. No og:description or Twitter card on any page. 609 pages carry only og:image.

Content & medical trust 20/100

- Critical — The site is badly out of balance, with blog posts swamping the pages that convert patients. 597 posts (95%) against 20 treatment pages.
- Critical — Posts follow a repeatable formula, a risk under Google's scaled-content policy. 311 URLs open with a place name. One sentence repeats on 257 posts, another on 170.
- Critical — Medical content has no named expert. Posts are credited to "Pain Specialty Group". 1 of 597 names a clinician, and the site has no "reviewed by" line.
- High — Posts show no publish or review date, and there is no date markup, so patients and search engines cannot judge whether medical advice is current.
- High — Main procedures have no service page: radiofrequency ablation, facet and SI joint care, spinal cord stimulation, peripheral nerve stimulation, kyphoplasty.
- High — Near-identical regional posts compete with each other. Kyphoplasty question posts repeat across 5 regional slugs, cervical epidural across 4.
- High — The stem cell page calls the therapy "safe" and says it helps "generate new tissue" without qualification. Needs clinical and regulatory review.
- Medium — Few pages cite medical sources such as NIH, FDA or AAOS. 23 of 631 pages.
- Medium — Key conversion pages are thin. /schedule has 160 words and /services has 336, both counting navigation.

Local SEO 30/100

- Critical — The Newington and Newmarket pages are near duplicates with about 444 words each. 97.7% text match.
- High — Posts target areas where the site lists no office. 201 posts: Southern Maine 72, Vermont 66, Northern Massachusetts 63.
- High — The homepage claims a "Center of Excellence" for NH, MA and ME, but every listed address is in New Hampshire.
- High — No service-plus-city pages exist, and only 2 location pages serve the whole Seacoast. Portsmouth appears on 5 of 34 non-blog pages.
- High — Both offices share one phone number, listed for both appointments and general inquiries. 603-383-2020.

Speed (mobile lab test) 50/100

- High — The largest element loads slowly. Google's target is 2.5 s. LCP is 6.4 s on the homepage and 3.9 s on a service page.
- High — Pages take too long to become usable. 9.7 s on the homepage and 12.5 s on a service page.
- High — Images are oversized for mobile. 1.08 MB could be saved by resizing and 635 KB with modern formats.
- Medium — The homepage is heavy. 2.5 MB, 94 requests, 433 KB of unused JavaScript.

Accessibility & security 35/100

- High — Text fails color contrast. 69 elements on the homepage, 45 on a service page.
- High — Links have no name for screen readers, even with the AudioEye overlay installed. 22 on the homepage, 20 on a service page.
- High — Google Tag Manager runs sitewide, and the Analytics ID is passed into the booking widget. Needs HIPAA review of what data is shared. 631 pages.
- High — No Notice of Privacy Practices found in the footer or on the privacy, terms and accessibility pages.
- High — All standard security headers are missing: HSTS, CSP, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, Permissions-Policy.
- High — The server publicly reports PHP 8.0.30, a version that stopped receiving security updates in November 2023.
- Medium — The server allows requests from any origin with every HTTP method (Access-Control-Allow-Origin: *).
- Medium — Mobile tap targets are too small or too close together. 6 on the homepage.

HOW IT WAS SCORED

Each area was graded strictly on the evidence, then weighted. Medical trust and content carry the most weight because this is health information. Findings come from a full crawl of all 631 sitemap URLs on 10 Nov 2026.

LAB RESULTS AND BASICS THAT PASSED

Lighthouse mobile homepage: Performance 71, Accessibility 84, Best Practices 78, SEO 92. It tests basics only. All sitemap URLs load, HTTPS redirects work, and canonical tags are correct. Speed was tested in one simulated run.

NOT ASSESSED

Keyword rankings, organic traffic, backlinks, Google Business Profile, reviews on third-party sites and real-user Core Web Vitals. These need account or tool access and are not part of the score.
