Website & On-Page SEO Audit: thrivepsychiatryandwellness.com

Thrive Psychiatry and Wellness · Audited 10 Nov 2026 · 23 pages crawled

28/100

Poor

Strict weighted score across six areas

The homepage contains hidden gambling links, which points to a possible site compromise. The review form sends only happy patients to Google, the TMS menu link is dead, and the homepage takes 18 seconds to fully appear on mobile.

Critical 4 High 20 Medium 18

SCORE BY AREA (weight in brackets)

Security & accessibility [10]	20/100
Local SEO [15]	20/100
Content & medical trust [25]	25/100
Speed (mobile lab test) [10]	25/100
Technical & crawl health [20]	35/100
On-page SEO & schema [20]	35/100

FIX FIRST

1. **Remove the hidden gambling links today.** Run a malware scan, update plugins and change all WordPress passwords.
2. **Stop filtering reviews by star rating.** Offer every patient the same public review link.
3. **Fix the TMS Therapy link** and publish a real TMS page on this site.
4. **Cut homepage load time.** Compress the main image, and reduce the 50 stylesheets and 29 blocking scripts.
5. **Correct the basics:** one spelling of the doctor's name, homepage placeholders, 13 missing descriptions, and clinic and physician schema.
6. **Build local reach** with Plano service pages, nearby-city pages and clinician-reviewed articles.

Security & accessibility 20/100

- Critical — Hidden gambling links sit off-screen on the homepage, with anchors such as "bettilt", "pinco casino" and "casino siteleri 2026". Google's crawler receives them too. Treat the site as compromised until cleaned. 16 links to 16 domains.
- High — All standard security headers are missing: HSTS, CSP, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, Permissions-Policy.
- High — Text fails color contrast. 7 elements on the homepage, 9 on the ADHD page.
- Medium — Patient names and comments are collected through a review plugin on a psychiatry site. Needs HIPAA review of how they are stored.
- Medium — The homepage publicly shows the WordPress and Elementor version numbers, which helps attackers target known flaws.
- Medium — Link text and heading order fail basic checks. 5 vague links and 6 out-of-order headings on the homepage.

Local SEO 20/100

- High — No pages target nearby patients. Frisco, Allen, McKinney, Dallas and Richardson appear on 0 of 23 pages.
- High — Service pages rarely mention the city where it counts. Plano is in 1 of 23 title tags and 2 of 23 H1s.
- High — Reviews load through a third-party widget, and the Google rating is an image with no alt text, so the HTML carries no review content.
- Medium — Telepsychiatry has no page of its own, so Texas-wide patients have nothing to land on. Telehealth or telepsychiatry appears on at most 3 pages.
- Medium — Different Google Maps short links appear across the site. Confirm they all open the same listing. 3 different links.

Content & medical trust 25/100

- Critical — The review form filters by rating. 4 and 5-star patients get a prompt to post on Google, and 1 to 3-star patients only see a thank-you. Google's policy bars selectively soliciting positive reviews. Counsel should also check FTC exposure. /swati/ and /thrive/.
- High — The only physician's name is spelled two ways, "Ellendula" and "Ellendulla", including in the site menu. All 23 pages.
- High — Template placeholders remain in homepage team popups: "A small river named Duden...", info@example.com and a +1 (859) phone number. 4 popups.
- High — The blog is abandoned. 3 posts, all published Sept to Oct 2023.
- High — Articles are authored by "admin" in their structured data, and the site has no "reviewed by" line on mental health information.
- High — Crisis information appears only on Resources. A psychiatry site should show 988 on every page. 1 of 23 pages.
- High — Important services have no page: TMS, medication management, OCD and telepsychiatry.
- High — The homepage promises care for children and seniors, but the footer calls the only listed provider an Adult Psychiatrist.
- Medium — "The Best Behavioral Health Clinic In Plano" is an unsupported superlative on a medical site.
- Medium — Most pages are out of date. 15 of 20 pages were last modified in 2024 or earlier.
- Medium — Footers show two different years, © 2023 and © 2025, and the awkward "Present by". All 23 pages.

Speed (mobile lab test) 25/100

- Critical — The main homepage content takes far too long to appear. Google's target is 2.5 s. LCP is 18.3 s on the homepage and 4.7 s on the ADHD page.
- High — Nothing shows for seconds, and pages are slow to become usable. First paint 5.1 s, usable at 13.3 s.
- High — Elementor add-ons block rendering. 50 stylesheets and 29 of 30 scripts on the homepage, costing about 2.5 s.
- High — The homepage is very heavy. 3.06 MB and 145 requests.
- Medium — Images are wasteful. 420 KB saved with modern formats, 378 KB from off-screen images.
- Medium — The menu is repeated in the HTML and browser caching is short. 1,791 page elements, 121 files with short cache times.

Technical & crawl health 35/100

- Critical — The TMS Therapy menu link goes to an external page that returns 404, and the site has no TMS page of its own. In the menu on all 23 pages.
- High — A hidden link, <a href="2">, sits in invisible markup and leads to an error page. Check it during the malware cleanup. All 23 pages.
- High — No analytics or ad tracking loaded on the homepage in testing, so patient enquiries may not be measured.
- Medium — Every missing URL returns 410 "Gone", which tells Google a page was removed on purpose. Normal missing pages should return 404.
- Medium — Review forms and the patient forms page are open to indexing and listed in the sitemap. /swati/, /thrive/, /new-patient-forms/.
- Medium — Phone and email links contain a stray space (tel:%20, mailto:%20). All 23 pages.
- Medium — Redirects are wasted: the menu links to /thrive without its slash, and http://www takes 2 hops to reach the live site.

On-page SEO & schema 35/100

- High — Meta descriptions are missing, including on Home, About, Services, Insurances and Contact. 13 of 23 pages.
- High — The homepage title is "Home - Thrive Psychiatry and Wellness". It has no search phrase such as "psychiatrist" and no city.
- High — Key schema is absent: no Physician, MedicalClinic, LocalBusiness or Organization on any page, and no FAQPage on /faqs/.
- Medium — Default page-name titles such as "Insurances - Thrive Psychiatry and Wellness" waste search space. 13 pages.
- Medium — Images have no alt text, including the doctor's homepage photo. 73 of 483 images on 19 pages.
- Medium — H1s are weak or missing. /resources/ and /new-patient-forms/ have none, and others read "BLOG" or "Depression Treatment Plano".
- Medium — Headings are overused for layout. 34 H2s on Resources and 26 on the homepage.

HOW IT WAS SCORED

Each area was graded strictly on the evidence, then weighted. Medical trust and content carry the most weight because this is health information. Findings come from a full crawl of all 23 sitemap URLs on 10 Nov 2026.

LAB RESULTS AND BASICS THAT PASSED

Lighthouse mobile homepage: Performance 56, Accessibility 95, Best Practices 74, SEO 79. All sitemap URLs load, HTTPS redirects work, canonicals are correct, and a Notice of Privacy Practices is published. Speed was tested in one simulated run.

NOT ASSESSED

Keyword rankings, organic traffic, backlinks, Google Business Profile, reviews on third-party sites and real-user Core Web Vitals. These need account or tool access and are not part of the score. How the hidden links got there was not investigated.
